EDUCATION

Brown University, Sc.B. Computer Engineering Providence, RI | **Expected Graduation May 2029**
Relevant Courses: Program Design with Data Structures & Algorithms, Introduction to Object-Oriented Programming, Applied Ordinary Differential Equations, Engineering Statics & Dynamics, Introduction to Software Engineering
Horseheads High School, 4.00/4.00 GPA, 99.71/100, Valedictorian Horseheads, NY | Class of 2025

PROJECT EXPERIENCE

ClubHub, Developer & Product Lead September 2026

- Built an AI-powered campus discovery platform that aggregates **1,250+ student organizations** and fragmented event data into a personalized recommendation system for university students.
- Engineered a full-stack architecture using **React, FastAPI, SQLite, ChromaDB, and Dropbox APIs**, supporting semantic search, graph-based visualization, and automated content ingestion.
- Implemented an AI matching pipeline combining embeddings, vector retrieval, and Claude-powered reranking to connect students with clubs aligned to academic, social, and career goals.
- Won **2nd Place in the Dropbox Challenge at HackMIT 2026**, recognized for building a scalable StudentOS concept that transforms unstructured files into actionable campus opportunities.

Vinyl, Creator & Developer May 2026

- Developed a native **macOS** Spotify mini-player supporting real-time playback controls, synchronized lyrics, and live metadata by integrating **Spotify APIs** with a **SwiftUI** frontend
- Implemented secure Spotify authentication using **OAuth 2.0 PKCE** and custom URL callback handling to ensure security of user
- Reduced perceived playback latency from ~500s to ~400ms (92% reduction) by implementing local progress interpolation and asynchronous API polling with **Combine-based state** management

Lifeguard Scheduler, Creator & Developer July 2026

- Eliminated manual creation of rotation schedules, cutting scheduling time from 30 minutes to 10 seconds weekly for a 7-9 person team
- Built an interactive frontend using **HTML, CSS, and JavaScript** to provide an intuitive interface for generating and managing daily schedules.
- Leveraged AI-assisted development tools to accelerate prototyping, debug scheduling logic, and evaluate alternative algorithmic approaches throughout the development process.
- Refined system functionality through an iterative development cycle, incorporating real-world operational requirements and continuous testing to improve scheduling fairness and accuracy.

PROFESSIONAL EXPERIENCE

Agentic AI Design Research Project, Design Researcher Providence, RI | September 2026 – Present

- Researched and prototyped agentic AI applications in human-centered design, collaborating with an interdisciplinary Brown/ RISD team
- Designed and evaluated AI-assisted systems through iterative testing, contributing to design reviews and technical direction
- Co-author project documentation and a research publication on emerging AI paradigms

Chemung County Harris Hill Pool, Head Lifeguard & Swim Instructor Elmira, NY | June 2024 – September 2026

- Maintained a safe environment for 100+ daily patrons by enforcing pool regulations and responding to emergencies
- Accelerated onboarding of 4-5 new lifeguards each season by training staff on rescue procedures, protocols, and risk prevention
- Instructed swim lessons for 30+ students per session across varying age and skill levels
- Designed structured lesson plans focused on stroke technique, endurance, and water safety

LEADERSHIP EXPERIENCE

Club Swim Team, Social Chair Providence, RI | June 2026 – Present

- Organize 10+ socials annually for a 100+ member swim team, boosting team-wide event attendance by 5x by fostering strong bonds between new and returning swimmers
- Launch inter-team social events with other Brown club sports, expanding Club Swim campus network across 6+ other teams

Brown Product Management, Associate Providence, RI | September 2026 - Present

- Selected for Brown University's product management community, gaining experience in **product strategy, user research, experimentation, and metrics-driven decision making.**
- Engage in product case studies and peer-led discussions focused on feature prioritization, growth, retention, and consumer product design.

TECHNICAL SKILLS

Languages: Java, Python, Swift, JavaScript, C#, Lua

Tools & Technologies: Git, GitHub, Unity, Fusion360, HTML, CSS, OAuth 2.0, REST APIs

Interests: Trying new food, hiking, baking, spikeball, swimming, oil pastels
